

## Program Description

[Discover E](#) (Engineering) is an evening of interesting, interactive and fun engineering, science, math, and technology demonstrations for K-12 students and their parents or guardians. It is held in conjunction with National Engineers Week which is celebrated at the time of George Washington's birthday, our nation's first President, who was a military engineer and land surveyor. Activities include 30-50 interactive demonstrations of basic engineering, science, technology and math principles that may include robots, reverse engineering, casting, crystal structures, forensic science, the effects of liquid nitrogen, slide rule, sound waves, electrostatics, mechanics, materials properties and materials processing.

Help shape the future of someone you care about – and then let them discover how they can shape the world! Find fun activities and events near you that will spark their imagination and open their eyes to the significance of engineering in their world. Discover-e connects you to engineering related resources in your area through maps, event calendars, event searches and an engineer network.
